## **EXECUTIVE SUMMARY**

New Gold Rainy River Mine completed Phase 1 Eastern-Whip-poor-will monitoring of the mine site in 2023 as per Condition 6.1 a) and 6.2 (a)-(g), following the schedule outlined in Appendix G of *Endangered Species Act* Overall Benefit permit FF-C-001-14.

Bald Eagle and Barn Swallow nest monitoring was conducted following requirements of provincial Environmental Assessment notice of approval Condition 5 detailed in New Gold's Follow-up Monitoring Plan.

Eastern Whip-poor-will surveys were completed following MECP guidelines at 8 stations within the Phase 1 mine site. No Eastern Whip-poor-will were detected.

No nesting activity or evidence of breeding was observed at any of the Barn Swallow nesting structures. Both Bald Eagle nests that were monitored were active and produced one fledgling at each nest.

Incidental Species at Risk observations included American White Pelican, Bald Eagle, Bank Swallow, Barn Swallow, Bobolink, Golden Eagle and Monarch butterfly.

This Species at Risk annual monitoring report summarizes the methods and results of Species at Risk monitoring as per Condition 7.0 of the Overall Benefit permit.

## 1.0 INTRODUCTION

Cerulean Environmental Ltd. (Cerulean) was retained by Ecometrix on behalf of New Gold Inc. (New Gold) to conduct Species at Risk (SAR) monitoring at Rainy River Mine (RRM) during the 2023 field season in partial fulfillment of requirements of the *Endangered Species Act* (ESA) Overall Benefit permit FF-C-001-14.

Eastern Whip-poor-will (EWPW) (*Antrastomus vociferus*) are listed as Threatened provincially and have been recently down-listed to Special Concern federally by the Committee on the Status of Endangered Wildlife in Canada (COSEWIC) in December 2022. The Committee on the Status of Species at Risk in Ontario (COSSARO) recommended the species be down-listed to Special Concern in 2023, however the species and its habitat are still currently protected provincially.

New Gold was required to complete Phase 1 Eastern-Whip-poor-will monitoring of the mine site in 2023 as per Condition 6.1 a) and 6.2 (a)-(g), following the schedule outlined in Appendix G of ESA Overall Benefit permit FF-C-001-14. Other reporting requirements pursuant to Condition 7 include documenting annual SAR observations, SAR awareness training provided to staff and contractors and providing a summary of equipment operating hours.

Additionally, Barn Swallow (*Hirundo rustica*) and Bald Eagle (*Haliaeetus leucocephalus*) nest monitoring was required per provincial Environmental Assessment (EA) notice of approval Condition 5 outlined in New Gold's Follow-up Monitoring Plan (Amec Foster Wheeler, 2016).

## 2.0 METHODS

Cerulean staff completed monitoring for Eastern Whip-poor-will on the mine site, as well as for Bald Eagle and Barn Swallows during three field visits from May 29-30 and June 25 and June 27-28, 2023.

### 2.1 Eastern Whip-poor-will Monitoring

Eastern Whip-poor surveys were completed on the mine site (Phase 1 monitoring) following the Draft Survey Protocol for Eastern Whip-poor-will in Ontario (MNRF 2014). Survey stations were 500m metres apart and three rounds of surveys were conducted. Previous surveys completed by Wood from 2015-2018 (Wood 2019) and Northern Bioscience in 2020 (NBS 2021) followed the *Whip-poor-will Roadside Survey Participant's Guide* (BSC 2012) protocol and survey station spacing ranged from 200-1600m. MECP previously indicated a strong preference for following the provincial survey protocol, and because the goal of EWPW monitoring is to accurately assess occupancy and distribution, the survey stations were revised to have a consistent 500m spacing. Eight survey stations were completed within the mine site (Phase 1) (Figure 1, Appendix A).

Surveys were conducted by an experienced avian biologist within a week on either side of the full moon within the survey window of May 18-June 30. Each survey was conducted on calm nights with little cloud cover and no precipitation. The first round of surveys was completed on May 29, the second on June 25 and the third round from June 27-28.

Surveys lasted 5 minutes and began 30 minutes after sunset and continued until roughly midnight or 01:00. Survey location (UTM), start and end time, and habitat description was recorded. Environmental conditions (air temperature, wind, cloud cover, moon visibility) and natural or anthropogenic noise disturbance were noted. Common Nighthawk (*Chordeiles minor*) (Special Concern) were recorded, as well as other bird song and amphibian species.

When EWPW were detected, the number of individuals, direction and distance were estimated, and where access allowed, triangulation efforts were made to determine a more accurate and precise location of the singing male within its territory.

When applicable, raw data was spatially analyzed to determine the number of territorial males and the centroid of each individual's location based on triangulation distances and directions. From this process, the number of unique individuals and their core territories could be mapped to determine the number of territorial males over each of the three rounds of surveys.

**Table 1. Moon and sunset times during EWPW surveys for Rainy River, ON 2023. Source [www.timeanddate.com](http://www.timeanddate.com)**

Date	Sunset	Moonrise	Moonset	%Illumination
May 29	9:09 pm	2:58 pm	3:16 am (on the 30 <sup>th</sup> )	73
June 25	9:25 pm	12:42 pm	1:21 am (on the 26 <sup>th</sup> )	47
June 27	9:25 pm	3:01 pm	1:50 am (on the 28 <sup>th</sup> )	67
June 28	9:25 pm	4:15 pm	2:08 (on the 29 <sup>th</sup> )	77

Figure 1. Phase 1 mine site Eastern Whip-poor-will survey stations, 2023.

## **2.2 Bald Eagle Nest Monitoring**

All known Bald Eagle nests are required to be monitored to determine annual and seasonal activity at the nest site and to determine fledging success as per provincial EA notice of approval Condition 5 outlined in New Gold's Follow-up Monitoring Plan (Amec Foster Wheeler, 2016).

Bald Eagles were previously listed as Special Concern provincially, however in 2023 were legally de-listed from the Species at Risk Act and are now Not at Risk.

Monitoring of two known Bald Eagle nests was completed to determine presence of breeding activity and nest success. These nests are located on Jones Road and Highway 600 west of the mine site (Figure 2). A Cerulean biologist visited the nests on May 29, 30 and June 27 and 30, and New Gold technicians monitored the nests on July 15. During monitoring efforts, the nest and surrounding area was observed to determine nest occupancy and breeding behaviour (presence of nestlings, adults carrying prey, etc.) Environmental conditions such as air temperature, wind and cloud cover were also recorded. Monitoring was typically completed for one hour each visit using binoculars and a spotting scope.

## **2.3 Barn Swallow Monitoring**

Four Barn Swallow (Special Concern) nest structures surrounding the mine site were monitored to determine occupancy, nest density and fledging success and breeding success as per provincial EA notice of approval Condition 5 in New Gold's Follow-up Monitoring Plan (Amec Foster Wheeler, 2016) on May 29, June 26-27, July 30-31 and August 16 ( Figure 2, Appendix D

### **Appendix B. Barn Swallow and Bald Eagle nest monitoring locations, 2023.**

). Cerulean and New Gold technicians observed the nest structures and surrounding area with binoculars and a spotting scope for typically 30 minutes. The nest structures were then visually inspected for evidence of nesting (nesting material, eggs, feces, feathers) and of predation using a small, handheld, telescoping mirror. Environmental conditions such as air temperature, wind and cloud cover were also recorded.

Figure 2. Bald Eagle and Barn Swallow nest monitoring locations, 2023.

## 2.4 Incidental SAR Observations

New Gold RRM is required to document all incidental SAR observations annually. Cerulean biologists also documented incidental SAR observations during fieldwork in 2023 and a summary of both is provided in Section 3.4.

## 2.5 Mortality Events Reporting

As per ESA permit Condition 7.3 (k), New Gold is required to document any SAR mortality events occurring within the project site and peripheral areas. If applicable, adaptive management strategies are to be outlined to reduce mortality.

## 2.6 Species at Risk Training

Species at Risk training is required for all staff and contactors who work on site as per Condition 4.3 (a) of the Overall Benefit permit. Training emphasizes educating personnel about the purpose of the OB

areas, the permit and its conditions, as well as mitigating harm to the species and avoiding damaging or destroying habitat.

## 2.7 Equipment Operating Hours

Operations at Rainy River Mine in 2023 included blasting, loading, hauling, dumping, crushing, milling rock placement, and dam construction. Vehicle and equipment operating time is recorded for each piece of equipment by on-board GPS and operator hour recorders. A summary of equipment operating hours is tabulated in Appendix G.

## 3.0 RESULTS

### 3.1 Eastern Whip-poor-will Monitoring

No EWPW were detected within the mine site on any of the three rounds of surveys in 2023.

Eastern Whip-poor-will numbers have declined on the mine site, since 2015 when two observations were reported. It is possible that individuals displaced or disturbed by mine operations have relocated to suitable habitats in the mine periphery.

**Table 2. Summary of Phase 1 mine site and periphery Eastern Whip-poor-will observations and breeding territories.**

Number of EWPW Observed (Phase 1 Mine Site)							
	2015	2016	2017	2018	2020	2022	2023
Mine Site	2	0	0	0	0	0	0
Total Breeding Territories	0	0	0	0	0	0	0

### **3.2 Bald Eagle Nest Monitoring**

An adult Bald Eagle was observed on the nest with one downy nestling on May 30 at Bald Eagle nest 1 (BAEA Nest 1) at Blackhawk (Figure 3). On June 28, one nestling with juvenile feathers was observed in the nest, with one adult perched nearby. The nestling was still observed on the nest July 15 by New Gold staff.

One adult was observed perched next to the Jones Road nest (BAEA Nest 2, Figure 2) with one downy chick in the nest (Figure 4). On June 27 an adult was observed perched next to the nest, and on July 15 New Gold staff confirmed one nestling was still in the nest.

It is assumed that both nests fledged successfully but this was not confirmed.

**Figure 3. Bald eagle chick on Bald Eagle nest 1, June 27, 2023.**

**Figure 4. Active Bald Eagle Nest 2 on Jones Rd with adult perched nearby and one chick on the nest, May 29, 2023.**

### **3.3 Barn Swallow Monitoring**

No evidence of breeding by Barn Swallows was observed at any of the nest structures during 2023 monitoring efforts. Two Barn Swallows were observed foraging near nesting structure D but flew into an abandoned garage where a nest was located. Two old grass nests were noted at nesting structure D, likely made by an Eastern Phoebe (*Sayornis phoebe*). Monitoring results of the nest structures is described in Appendix D.

### **3.4 Incidental SAR Observations**

To support the monitoring of SAR species onsite, the Environmental Department implemented a site wide protocol for reporting wildlife in 2015. Through this system the following SAR sightings were reported by New Gold staff and contractors in 2023; 32 American White Pelican, 9 Bald Eagle, 30 Bank Swallow, 6 Barn Swallow, 19 Bobolink and one Golden Eagle.

In addition to on-site reporting completed by New Gold, Cerulean staff also documented incidental SAR observations while on the project site and OB areas during field work:

- Five Barn Swallow (listed as Special Concern provincially) were observed May 29 and June 27 flying and foraging within the mine periphery.
- Two adult and two nestling Bald Eagle (listed as Special Concern provincially but delisted in 2023) were observed during monitoring of two known nests (see section 3.3).
- Eleven Bobolink (listed as Threatened provincially and federally) observed or heard within the site periphery on May 29-30 and June 26-27. See Figure 5.
- One Monarch butterfly (listed as Species Concern provincially) observed in the mine periphery May 29.

A complete list of SAR observations is outlined in Appendix E.

**Figure 5. Male Bobolink within south project periphery on Hwy 600, June 27, 2023.**

### **3.5 Mortality Events Reporting**

No injured or deceased SAR species were documented within the project site or adjacent area during 2023.

### **3.6 Species at Risk Training**

As per the ESA permit reporting requirements (Condition 4.3 (b)), a complete summary of SAR awareness training provided in 2023 indicating the names of personnel trained, education material covered, date of training and method of training is provided in Appendix F. A total of 2,655 personnel and contractors completed the training.

### **3.7 Equipment Operating Hours**

The equipment operating hours for heavy machinery in 2023 are summarized in Appendix G.
